

IBEROELEVA

the best crane lifting experience

Girder Cranes

SINGLE GIRDER OR DOUBLE GIRDER

Girder cranes carry out the heaviest jobs and play a key role in any industry. They are an excellent solution for increasing productivity and safety at work. They are sized individually and according to the customer's needs in order to maximize the available space.

Used for indoor and outdoor services, this equipment is manufactured in the most diverse capacities. They are a viable solution when the span is too big, or the building cannot support lifting loads via overhead cranes. At the same time, it also allows the movement of loads under cranes, thus increasing their productivity.

Gantry and Semi Gantry Cranes

SINGLE GIRDER OR DOUBLE GIRDER

Jib Cranes

COLUMN, WALL MOUNTED OR MARINE

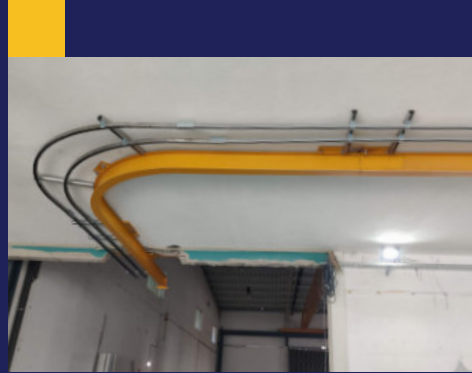

Jib cranes are the ideal solution for performing tasks close to the workstation or to optimize manufacturing processes. We manufacture all types of jib cranes: pillar, wall mounted and marine, depending on the needs of our clients. With options with cable or chain hoists, electric or manual drive or even with manual or electric rotation.

They are often used when space is limited but also when there is a need to make maximum use of lifting height. They are the appropriate choice when there are production lines with different areas, in this case they are equipped with more than one hoist, making them respond quickly and simultaneously.

Mono Rails

STRAIGHT OR CURVED

The ideal solution for moving light loads. The EUROSYSTEM can take the form of a monorail, single-girder cranes or even double girder cranes.

Euro System

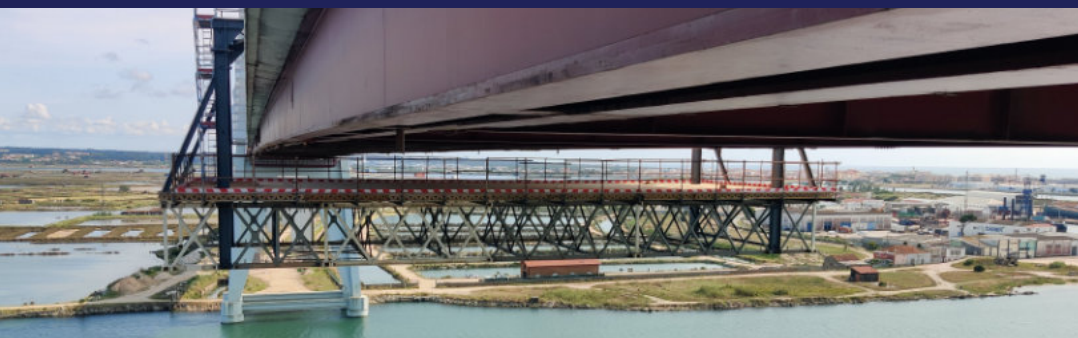

STEEL OR ALUMINIUM

Special Projects

TAILOR MADE SOLUTIONS

In addition to the models considered standard for lifting and movement equipment, we have a team of professionals and various software that allow us to meet the needs of our customers, obtaining solutions that can be adjusted to each situation.

Transfer cars can be manufactured in a wide range of capacities and for a wide range of products. They allow movement at ground level and are often the ideal solution for transfers between pavilions.

Transfer Cars

ELECTRIC OR BATTERY MOVED

We have a wide variety of lifting and moving accessories that allow movements to be carried out more safely and in an easier and more comfortable way. Each type of industry requires its own characteristics that best suit each product, and which must be respected. These products can also be standard or developed to suit the customer needs.
